MUHAMMAD SHAMEEL KS

Software Engineer | AI Automation & Full-Stack Development

hi@shameel.dev | +91 96057 96725 | Palakkad, Kerala, India
shameel.dev | github.com/muhammad-shameel-ks | linkedin.com/in/muhammad-shameel-k-s

Software engineer who ships production systems end to end — Flutter and Next.js front ends, .NET and Postgres services, and the CI/CD that puts them on real devices. Also builds the AI agents and automation that remove the manual work around them.

EXPERIENCE

Software Engineer (Agentic Engineer) May 2026 – Present
SpeeHive (ProdEngines Pvt Ltd) — Palakkad, Kerala

- Deliver the **PALnxt** maritime maintenance platform for the client MariApps Marine Solutions across three codebases — Flutter mobile, .NET / C# services and a React / TypeScript web console — with 350+ commits and 136 merged pull requests.
- Built the crew app's offline-first core: a 100 MB read cache with 24 h / 30 d staleness limits and an offline capture queue that replays on reconnect, so engineers keep working with no signal at sea.
- Shipped approvals inbox, My Work, equipment hierarchy with spare-ROB checks, counter readings and risk-assessment / work-permit gated job sign-off; added push notifications end to end (device registration, delivery channel, tap-to-item routing) and biometric cold-start unlock.
- Owned mobile CI/CD: per-environment Flutter flavours (dev / UAT / prod) with Firebase configs, self-hosted macOS runners handling manual iOS signing and provisioning profiles, Firebase App Distribution, and automated versioning, changelog gating and tagging on every build.
- Backend in .NET / EF Core: designed the vessel-group domain (migrations, tenant isolation, audit trail), made defect reporting idempotent via client request IDs, and built the QDMS documents module — lock / override, favourites, expected reading time, change requests with evidence references.
- Built the team's AI layer: an **Asana coding agent** that fetches repos, edits code and updates tasks; a tool-calling **Linear agent** on Cloudflare Workers; a Sanity browser-agent for spec QA in the AI-DLC pipeline; and the Next.js rewrite of legacy .NET / Angular tools.

Software Developer Nov 2025 – Jan 2026
Kerala State Development Corporation for SC/ST — Thrissur, Kerala

- Resolved database and migration defects across the agency's .NET and MySQL systems, restoring data accuracy during a legacy platform migration.
- Built **KSDC Smart Helper**, SQL tooling adopted by non-technical staff for day-to-day reporting.

SELECTED PROJECTS

Scentance Next.js 16, TypeScript, Three.js, Supabase — scentenceparfum.com

- Live fragrance e-commerce platform with interactive 3D product scenes; real customers and real orders in production.

Stock Salt Next.js, TypeScript, Supabase Realtime

- Multi-outlet inventory and POS SaaS that syncs stock across every terminal in real time, eliminating overselling between outlets.

Office Pal Flutter, Supabase

- College administration system replacing paper workflows; anti-cheat exam seating for 2,000+ students with print-ready PDF output.

TECHNICAL SKILLS

Languages TypeScript, Python, C#, Dart, SQL, Bash
AI & Automation Tool calling, MCP, OpenAI API, agent orchestration, spec-driven pipelines, n8n
Frontend React, Next.js, Flutter, Angular, Astro, Tailwind CSS, Three.js
Backend & Data .NET / EF Core, Node.js, PostgreSQL, SQL Server, MySQL, Supabase, PocketBase
Infrastructure Docker, Kubernetes (K3s), GitHub Actions, Cloudflare Workers, Tailscale, Linux

EDUCATION

BSc Computer Science 2022 – 2027 (expected)
St Thomas College, Thrissur — University of Calicut
